Key Features

- Applies to all Genie® scissor and S and Z boom lifts
- Up to three years retroactive
- Maintenance procedures reduced, or even eliminated, to save time and labor costs
- 24 manuals for booms and 6 for scissors now condensed into one easy-to-use manual for each family
- Booms service part number 1268489 and Scissors service part number 1272215

NEW MAINTENANCE PROTOCOL STREAMLINES BOOM & SCISSOR LIFT CARE

GENIE - IN THE FIELD WITH YOU

When it comes to maintaining your equipment, Genie just made completing routine tasks a whole lot easier.

To make completing routine tasks more manageable, Genie has designed a new approach to boom & scissor lift maintenance that condenses procedures into one manual, simplifies tasks, extends service intervals so the whole process takes less time to complete.

Previously, Genie® lifts were subject to several different maintenance protocols (depending on model) and required 24 separate boom manuals and 6 scissor manuals to help you maintain your equipment. We have streamlined protocols and now offer one condensed, easy-to-use manual, for each family. This will help lower your

total cost of ownership and drive your rental return on invested capital (rROIC). These manuals may be accessed either in hard copy or downloaded from the genielift.com.au/genie360/servicemaintenance.

The new, one-stop maintenance manuals for all Genie boom & scissor lifts contains complete performance specifications, as well as new extended service intervals recommendations and a streamlined list of maintenance tasks. The new program will help your Genie boom and scissor lifts to spend less time in the shop and more time out on rent.

Uptime Focused

Genie quality is defined by uptime in the field and rROIC. Our industry-leading

reliable equipment is designed and built to make rental customers' jobs easier and more profitable.

Another key to positively impacting your rROIC is to reduce the cost in time and money needed to maintain equipment. That's why our team spent months in the field to better understand how scheduled maintenance fits into rental customers' operations.

The result: A new approach to maintenance that has standardised the processes across the entire Genie boom & scissor product lines. This new approach makes scheduled maintenance less time consuming and fits with the way our customers work.

Reduce Maintenance Time, Increase Savings

Many periodic procedures have moved from quarterly and semi-annually to annually. Commissioning has changed, too. For boom lifts, rather than perform some of the tasks at the 30-hour mark and some at 50 hours or longer, now all of the commissioning assignments are set for 50 hours and 150 hours.

Extending our boom equipment's service schedules saves customers time and money because Genie machines will stay out on rent rather than in the shop. We estimate these changes could save your service team 20-25% on service resources per boom.

Download the new manual for Genie scissor and S and Z boom lifts now at genielift.com.au/genie360/servicemaintenance or order a hard copy using service part number 1268489 for booms and 1272215 for scissors.
