

Terex Australia recognises that its activities, products or services may have a significant impact on the environment and as a responsible corporate citizen we acknowledge our responsibility to protect the environment. Terex is committed to understanding and managing environmental impacts across all our operations with due consideration to the principles of ecological sustainability, prevention of pollution and continual improvement in environmental performance.

In particular, it is our policy to ensure the HS&E integrity of our processes and facilities at all times and at all places. Terex will do so by adhering to the following principals:

COMPLIANCE

Terex will comply with the provisions of relevant environmental legislation and regulations and will implement programs and procedures to ensure compliance. Compliance with HS&E standards will be a key ingredient in the training, performance reviews and incentives of all employees.

RISK REDUCTION, PREVENTION, RESOURCE MANAGEMENT

Terex will seek opportunities, beyond regulatory compliance requirements, for reducing risk to human health and the environment, and Terex will establish and meet our own HS&E quality standards where appropriate.

Terex will employ management systems and procedures specifically designed to prevent activities and/or conditions that pose a threat to human health, safety or the environment. Terex will look for ways to minimise risk and protect our employees and the communities in which we operate by employing clean technology, including safest technologies and operating procedures, as well as being prepared for emergencies.

Terex will strive to minimise release to the air, land, or water through use of cleaner technologies and the safer use of chemicals. Terex will minimise the amount of toxicity of wastes generated and will ensure the safe treatment and disposal of waste. Terex will manage scarce resources, such as water, energy, land, forests and in an environmentally sensitive manner.

MANAGEMENT IS COMMITTED TO:

- Developing and implementing environmental management systems that plan, document, monitor and improve environmental performance,
- Using our natural resources efficiently including minimizing, reusing and recycling wastes to the extent practicable,
- Working with customers, contractors, suppliers, government and local communities to achieve positive environmental outcomes,
- Establishing measurable environmental objectives and targets aimed at reducing environmental impact, and
- Monitoring, reviewing and reporting on environmental performance including the achievement of environmental objectives and targets as established.

This policy is an integral part of the Terex Risk Management philosophy and will be reviewed to ensure its ongoing relevance and to confirm the Terex commitment to the Environment.
